Description

Description

× *Gasteraloe* hybrids are typically stemless or almost stemless. Their succulent leaves, which are usually spotted or marked and have toothed margins, form rosettes.

Gonialoe variegata and *Aristaloe aristata* are especially commonly used for these hybrids, as they are far more amenable to hybridization with gasterias than most other "aloes".

Aloe Hybrid: Blinkblaar Gasteraloe (Aloe aristata x Gasteria amstrongii)
