Description

Description

Aloe camperi. This species from the Aloe genus is indigenous to Africa specifically the regions of Ethiopia and Eritrea, where it is considered as one of the most important medicinal plants. Aloe camperi is a perennial, succulent plant with orange flowers and rosette leaves that grow in clusters. The leaves grow up to 60 cm long and leaf base can reach up to 15 cm wide. Like other species from the Aloe genus, it is used for treating skin conditions and as a laxative. However, excess use of Aloe sap as a laxative may cause congestion and irritation of the pelvic organs. Plant exudate is known to have anti-fungal properties. Aloe camperi is also cultivated as an ornamental plant.

African Aloe: East Africa (*Aloe camperi* *cornuta*)
