Description

Description

The leaves of the *Sedum rubrotinctum* plant change colour from green to red during the summer months as a protective adaptation. They sprout bright yellow flowers from between the leaves in mid-spring.

Succulents: Jelly Bean Plant (*Sedum rubrotinctum*)

Taxonomy

It has also been classified as a hybrid plant — of *Sedum pachyphyllum* × *Sedum stahlii* — named *Sedum* × *rubrotinctum* .

Cultivation

Sedum rubrotinctum is cultivated as an ornamental plant, for planting in gardens and as potted plants. It is grown very easily and tolerates all types of soil except for those that are poorly drained. It grows very well in summer, can take variations in climate, although it is not frost-tolerant.

New plants may be grown from leaves (or beans) that drop off or are separated from the stem and laid on the soil.

Sedum rubrotinctum is poisonous and may cause irritation when ingested or touched.
