Description

## Taxonomy

Wild plants had been found in 1899 by Joseph Nelson Rose near Guadalajara, Jalisco. The species was named by Alwin Berger in 1913 in honor of Maurice de Vilmorin, based on specimens collected by Leon Diguët and grown at the Jardin des Plantes in Paris.

## Distribution

## Succulents: Octopus Agave (*Agave vilmoriniana*)

---

In nature, the octopus agave prefers the cliffs of barrancas of southern Sonora, Chihuahua, Sinaloa, Jalisco, Durango, Nayarit and Aguascalientes, typically between elevations of 600 to 1,700 meters.

### Uses

*Agave vilmoriniana* has one of the highest concentrations of the sapogenin smilagenen, and in parts of Mexico the leaves are cut, dried, and the fibers are beaten to make them into a brush with built-in soap.

The "octopus agave" is cultivated as an ornamental plant for planting in gardens and containers.
