Description

Succulents: Skoonma se tong (*Sansevieria aethiopica*)

Description

Perennial, growing from a thick rhizome, often forming large colonies. Leaves 3-15 in rosette-like clusters, erect or somewhat recurved, 25-40 cm long, thick and leathery with a rough surface, green, mottled with paler bands; apex whitish, spiny; margin whitish with an inner red line. Inflorescence dense spike-like, 20-55 cm long; peduncle 25-45 cm long with several papery bracts 4-9 cm long, sheathing at the base. Flowers white, cream or greenish, sometimes tinged purple, opening at night; tube 20-35 mm long; tepals 11-20 mm long. Stamens as long as or slightly longer than the perianth. Fruit 1-3-lobed, each lobe 6-8 mm wide, red when ripe.
